

We're all power companies now.

Are you ready to take control?

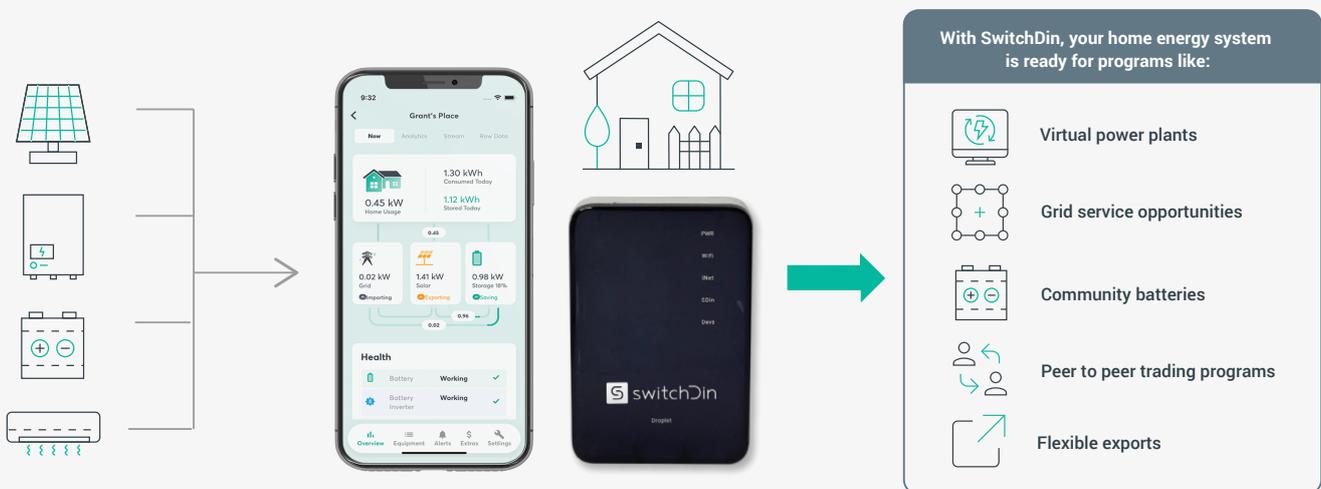

Enabling tomorrow's energy

Energy used to be a one way street, but solar has changed that.

Buying and selling energy creates a market, which means there's money to be made. Until recently that was the energy companies' domain, but now it's like the wild west as everyone tries to grab their part of the new world.

SwitchDin helps you stake your claim, whatever the future holds.

How do we do that? By giving you control, over power.

1. Information

We've developed a cost-effective, intelligent monitoring device that connects to your solar inverter, battery storage system and a growing suite of other devices to deliver insights into the ebb and flow of energy through your system.

2. Management

We give you insights to maximise the value of the energy you've generated, and even combine with others to create a Virtual Power Plant – tapping into the wholesale energy market, and saving even more money.

How you'll benefit.

SwitchDin Droplets connect to your solar, storage and key energy using devices, and then connect to each other through our online platform, Stormcloud, delivering insights.

Save energy & money

By optimising the use of the energy you create, you'll be more efficient by far.

Reduce the need for fossil fuels

By maximising the amount of solar on the grid, You're helping create a more sustainable energy system.

Join forces to generate discounts, and save even more

You'll be able to connect to other solar systems, creating a virtual power plant with real buying power and pull in the market.

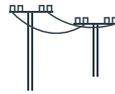

Make informed decisions

By setting alerts for crucial inflection points, battery charge or power flow.

Avoid lock-in contracts with energy retailers

Choose the best deal, and the plan that works for you.

Help prevent future power outages

In the not too distant future, Droplets will enable your pool pump, air conditioning or other opt-in devices in your home to be switched on remotely, helping to stop the grid from overloading. And you'll be rewarded for this service too.

Australian engineered, world class technology.

Based in Newcastle, SwitchDin's pioneering technology is taking the world by storm. And as the future unfolds the software in your Droplet updates automatically, so you're always prepared for the road ahead.

Droplets work with a range of solar inverters and battery storage systems, so you can mix and match equipment brands and if you want to expand your system down the line, it's not going to be a problem.

Compatible brands include:

SUNGROW

GOODWE
your solar engine

Tracking your energy, controlling your power.

A glimpse into your system's energy production, consumption & battery usage.

What's happening now?

Is everything ok?

What can I expect?

SwitchDin Droplets ensure compliance with the South Australian government's regulatory Smarter Homes program, and programs in other states. Ask your installer for details.

So if you like what Droplets can do for you now, and in the future, then let your installer know, and they'll make sure you're ready to stake your claim, whatever the future holds.
