

Installer Training

SA Smarter Homes requirements

Technology validated through collaboration
with players across the industry

We bridge the gaps between energy companies, equipment manufacturers and energy users.

We integrate & organise the world's energy resources to create a cleaner, smarter electricity system.

Energy utility & retailer partners include:

Manufacturing partners include:

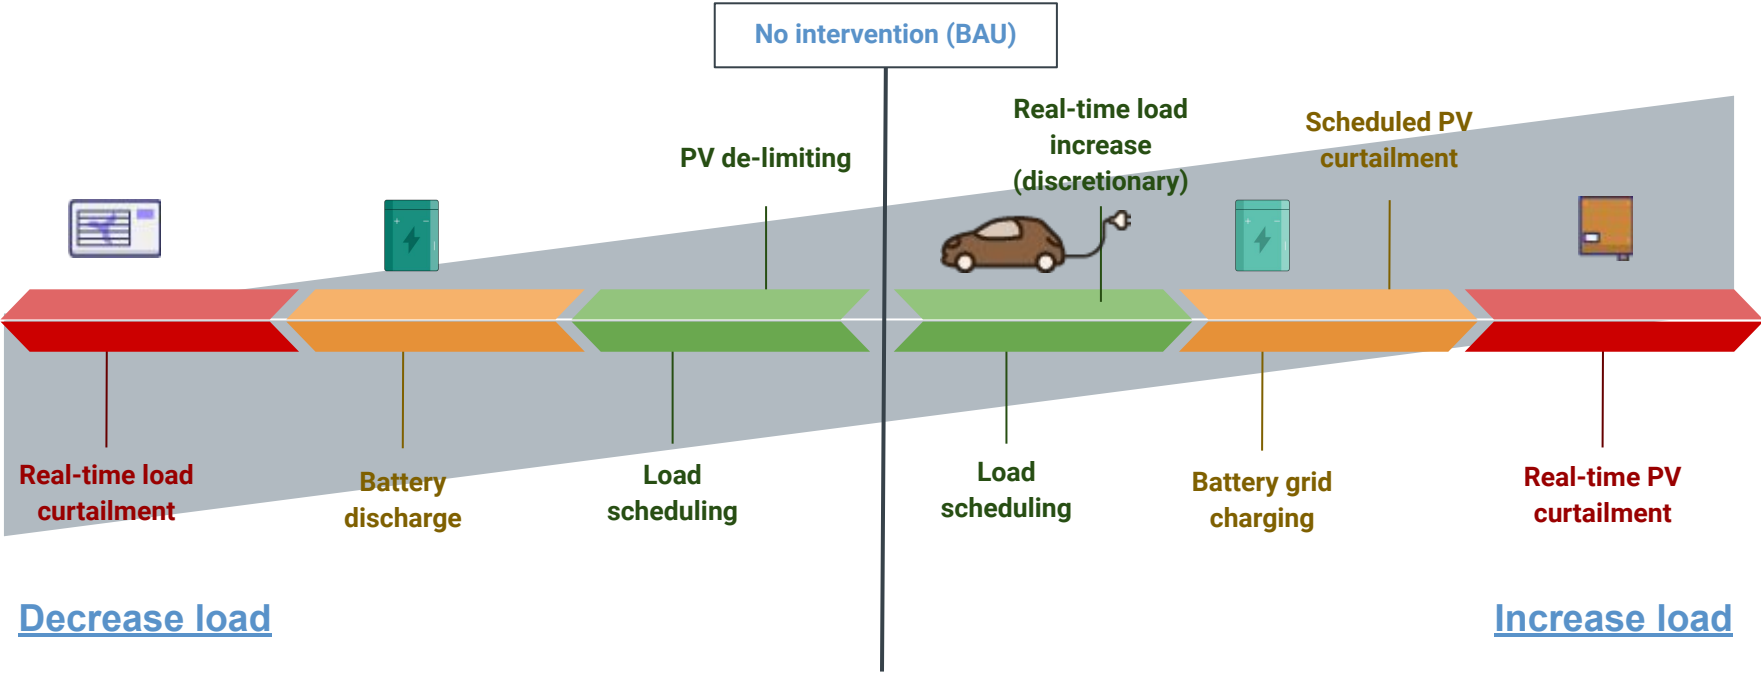

Platform integrations include:

Our vision for DER

Flexibility with customer engagement

No intervention (BAU)

Merit order customisation & DER device class grouping for setting priorities & streamlining management

Hardware: Droplet controllers

- Powerful, affordable energy management devices using off-the-shelf components
- Connect & communicate directly with inverters & other devices (no CTs) via ethernet or internet router
- Vendor-agnostic: Compatible with many popular brands
- Enable detailed system monitoring (solar, batteries, loads) for end users
- Utility-grade security in communications
- Enable virtual power plants & eligibility for a range of incentive schemes (including HBS & elements of Smarter Homes)

Droplet™

Droplet

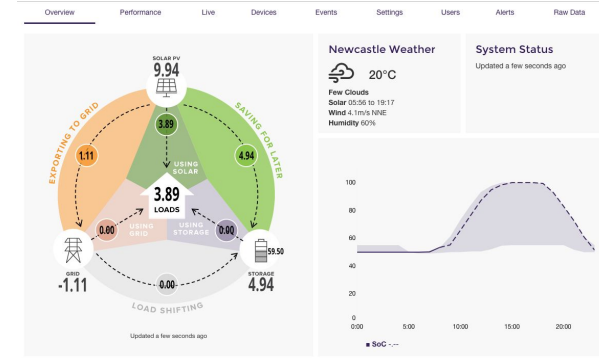

Utility Droplet

Cloud software: Stormcloud platform

- Collects, aggregates, stores and distributes measurements in real time with sub-second latency
- Determines optimal use of DERs within the network and communicates setpoints & targets to Droplets for application to local DERs.
- If communications are lost, Droplet will carry out last wishes of Stormcloud
- Complete virtual power plant & microgrid management toolkit for utilities & aggregators
- New mobile & web app coming early 2021

stormcloud™

SA Smarter Homes: Overview

- Emergency backstop in case the SA-VIC interconnector fails during a time uncontrolled rooftop solar meets total demand of the network
- Agents are required to shed generation when they are asked to.
- SAPN to work with technology providers to provide services
- Agents are required to get permission from owners of a system. Creates difficulties with people moving houses. SAPN, retailers and MSPs know when you move house which simplifies this requirement.
- There are various solutions for compliance on the market.

SA Smarter Homes Compliance: Why SwitchDin?

Droplets vs API integration

- Complete end-to-end security with Australia-based data storage & control infrastructure
- Sub-second latency for real time monitoring, management & control (for FCAS markets, etc)
- Future-proof for system add-ons & upgrades with other equipment brands
- SwitchDin can also provide API integration, but not preferred option

Droplets vs contactor

- Contactor not compatible with AC-coupled / hybrid inverters
- Limitations for adding batteries
- Not possible to use inbuilt inverter consumption monitoring
- Makes typical export limit controls non-functional
- Metering service providers must do extra wiring - inflexible installation

SA Smarter Homes Compliance: Why SwitchDin?

Droplets vs zero export

- Get the full value of your investment over many years
- Increase the penetration of PV into the Australian Energy system
- Reduce the entire community's carbon footprint
- Access to future energy markets which require ability to export

Get more with SwitchDin

Customers who choose the SwitchDin / SA Power Networks Relevant Agent Solution also get:

Free energy monitoring for the whole system

- **Free basic home energy monitoring** & system health check for solar, batteries & grid
- **Free advanced energy monitoring until April 2021**, including real-time & historic data views and csv download
- **Amazing new app coming in 2021**

Future-proofing

- **Earn credits & discounts on your energy bill:** Freedom to join a growing number of virtual power plant (VPP) offers, at no cost to customer and with no lock-in to a single provider or technology
- **Easily upgrades with no additional hardware or cost:** Systems will continue to comply with Smarter Homes rules even if you add more compatible equipment

Support Australian technology and Australia's energy system

- **Australian technology, with local support:** SwitchDin is based in Newcastle, NSW
- **SwitchDin's tech is enabling Australia's energy transition:** By supporting us, you are supporting a cleaner & more distributed grid
- **Complete end-to-end security** with Australia-based infrastructure

Installers: Why SwitchDin?

Get granular AC and DC side data

- 10 second live stream of AC and DC parameters
- 1 minute interval historical data

OEM agnostic

- A single login for multiple inverter and battery brands
- Single sites can easily have multiple OEM brands

Save a truck roll

- Get access to an inverters local WUI through a secure connection between the Droplet and Stormcloud
- Detailed inverter settings and diagnostics without returning to site.
- Get in touch support@switchdin.com to learn more about this feature

Nominating SAPN as an Agent

SEG form

Select the following on the application:

Relevant Agent: **SA Power Networks**

Relevant technology: **SwitchDin - Internet connected SwitchDin Droplet device connected to supported inverters via Modbus**

Installation

As part of installation, ensure the system is connected to the internet and correctly set up in Stormcloud as per the following installation instructions.

eCoC

When completing the electronic Certificate of Compliance (eCoC), confirm the same Relevant Agent and technology as the SEG.

Droplet Specifications

- Wifi
- Ethernet
- USB
- RS232, RS485 and more via converters

- Rugged aluminium enclosure
- 2 x Ethernet
- USB
- RS232, RS485 and more via converters
- 3G/4G LTE modem

DIN rail mount

Notes for pre-installation

- To ensure devices are discovered and controllers can be added on-site the **droplet software needs to be updated before installation.**
- This requires that the droplet is powered on and connected to the internet via ethernet overnight.
- The update will occur automatically at ~ 11:30 PM AEDT.

Required LED indicators

Resi Droplet Installation

Packing List

- 1 x SwitchDin Droplet
- 1 x Power Supply
- 1 x USB adaptor
(optional depending on inverter)

Inspection

- Check that all parts are as per packing list.
- Check for signs of physical damage.
- If any parts are missing or visibly damaged, please contact SwitchDin prior to installation.

Mounting

- The Droplet can be mounted on a standard DIN rail.
- Indoor installation.
- Below 40 degrees ambient

Utility Droplet Overview

Power Connector

2 x Ethernet Port

DIN rail mount

Utility Droplet Installation

Packing List

- 1 x SwitchDin Droplet
- 1 x Power Supply
- 2 x antenna
- 1 x din rail mount

Inspection

- Check that all parts are as per packing list.
- Check for signs of physical damage.
- If any parts are missing or visibly damaged, please contact SwitchDin prior to installation.

Mounting

- The Droplet can be mounted on a standard DIN rail.
- Indoor installation.
- Below 60 degrees ambient

Droplet internet connection

Resi Droplet

Utility Droplet

Connect to Eth0

WiFi (Resi only)

Download the **SwitchDin Installer** app from the Google Play or iOS App store and follow the instructions.

Notes for internet/network connection

- The best place to install the Droplet is close to the router/modem with an ethernet connection. This simplifies installation and provides the highest reliability.
- If a wifi or ethernet over powerline extender is being used, it is compulsory to connect the device directly to the USB port of the Droplet using an Ethernet - USB converter (see below)

Power the Droplet

Resi Droplet

Plug power supply into GPO

Utility Droplet

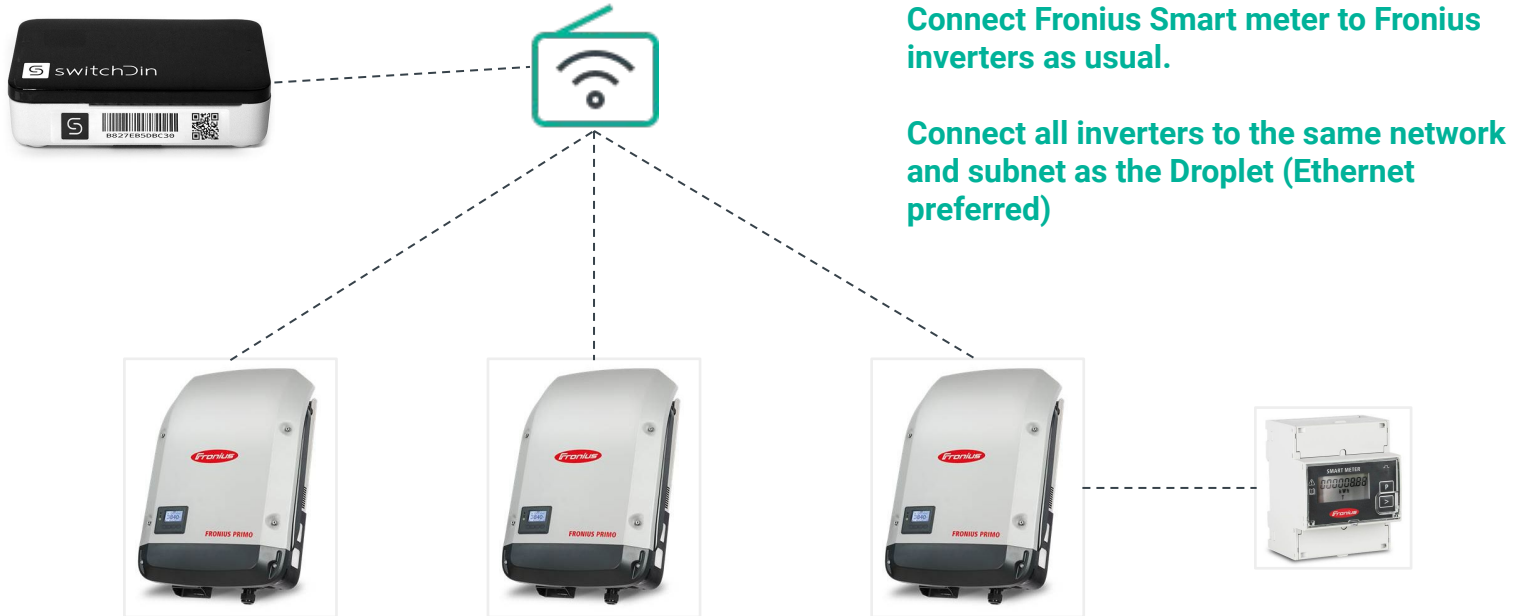

Plug power supply into GPO

Internet prerequisites

Mobile/tablet being used for commissioning is required to have an internet connection (wifi/4G) to configure the Droplet.

Internet connection required on site for Droplet/Stormcloud operation.

Fronius connection

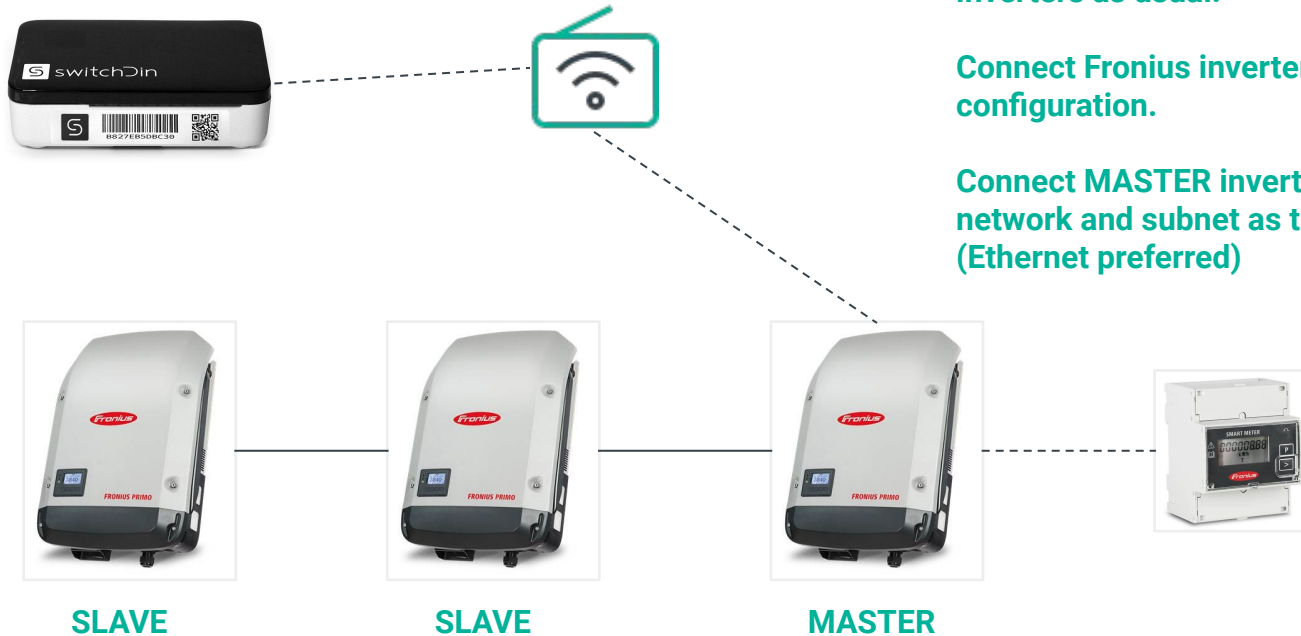

Connect Fronius Smart meter to Fronius inverters as usual.

Connect all inverters to the same network and subnet as the Droplet (Ethernet preferred)

Activate Modbus TCP Port 502

(Fronius Datamanager Modbus TCP & RTU document page 69 onwards)

Fronius daisy chain connection

Connect Fronius Smart meter to Fronius inverters as usual.

Connect Fronius inverters in daisy chain configuration.

Connect MASTER inverter to the same network and subnet as the Droplet (Ethernet preferred)

Activate Modbus TCP Port 502 on MASTER inverter
([Fronius Datamanager Modbus TCP & RTU document page 72 onwards](#))

SMA connection

Connect all inverters and energy meter to the same network and subnet as the Droplet (Ethernet preferred)

Activate Modbus TCP Port 502

[\(Technical Information - SMA and SunSpec Modbus® Interface document page 20\)](#)

Q CELLS connection Option 1

Connect Q.HOME to energy meter as per normal installation.

Connect Q.HOME to the same network and subnet as the Droplet (Ethernet preferred)

Commission the Q.HOME

Q CELLS connection Option 2 (if converter is supplied)

Connect Q.HOME to energy meter as per normal installation.

Connect inverter Ethernet directly to Droplet via Ethernet to USB converter provided.

The Droplet will provide internet connection to the Q.HOME.

Commision the Q.HOME.

Qcells activating Modbus TCP port 1502

Directly from inverter

Enable PMS External Mode as per Section 7 in the [Q.HOME manual](#).

Having issues? Please call 1800 QHOME 0 and Q CELLS can support

Eguana Technologies Evolve

Install Eguana system as normally directed.

Connect all inverters to the same network and subnet as the Eguana. The Droplet is built into the Eguana. (Ethernet preferred)

Activate Modbus TCP Port on PV inverters

Redearth Sunrise

Droplet already built in with 3G/4G capability from Redearth.

Install and commission as normal.

Ensure NMI and choice of Agent is provided to Redearth

Wiring while using a wifi/powerline extender

Connect inverter to energy meter as per normal installation.

Connect inverter Ethernet directly to Droplet via Ethernet to USB converter provided.

The Droplet will provide internet connection to the inverter.

Connect the Droplet to the extender.

Commission the inverter.

Fimer connection

Commission Fimer inverters as per usual.

Connect all inverters to the same network and subnet as the Droplet (Ethernet preferred)

Fimer Ethernet daisy chain connection

Commission Fimer inverters as usual.

Connect Fimer inverter in daisy chain.

Connect one inverter to the same network and subnet as the Droplet (Ethernet mandatory)

Troubleshooting

Troubleshooting

The LED Header indicates that there is no power. What should I do?

1. Check the GPO is switched on and has voltage.
2. Check whether the micro USB connector has become dislodged from the Droplet.
3. Test another power supply which uses micro USB. A mobile phone charger may be suitable.

[Link to video troubleshooting guide](#)

The LED header indicates the inverter is not connected. What should I do?

1. Is the inverter on the same network/subnet as the Droplet?
2. Is the inverter powered up?
3. Is the Modbus TCP port open/activated?
4. Is the Droplet connected to the network?
5. Have the cables connecting Droplets to inverters been tested for continuity?
6. Power cycle inverter and Droplet.

Troubleshooting

The Droplet will not connect to the network. What should I do?

1. Reboot router/modem/switch.
2. Check number of devices connected to the network. Home networks may have a limit of 10-20 devices.
3. If possible, try ethernet instead of wifi as the wifi may be weak.
4. Ensure password entered is correct.
5. Check internet connectivity of the Ethernet cable by plugging into a laptop.
6. IF using Ethernet, are the two lights on the ethernet port blinking. If there are no blinking lights the link is broken. Check the continuity of the Ethernet cable.

Process for support

Troubleshooting

Follow the troubleshooting guide in this document and videos on support page.

Send information

If the Troubleshooting does not fix the issue, send the following info to support@switchdin.com

1. Droplet ID
2. How is the droplet Connected to devices/inverters?
3. Brand/model of inverters/meters?
4. Description of issue and relevant troubleshooting results.

If the Droplet is connected to the internet, we will be able to remotely perform diagnostics.

If needed, call.

If the Droplet is not connected to the internet and there is an urgent need of support, please call our helpdesk on +61 02 4786 0426
